

COVID-19 Facts

Thank you for helping to promote the COVID-19 vaccine to those who matter to you – your employees, fellow club members, friends, neighbors and loved ones.

Facts are crucial to help with your conversations about the vaccine. Here are some of the key facts you can use with confidence.

- The vaccines are safe. During clinical trials, the vaccines were found to be exceedingly safe, with headache, fatigue and arm pain reported as the most common side effects.
- Even if your risk of complications from COVID-19 is low, you can still contract the infection and spread it to others, so it's important to get vaccinated.
- Older adults should receive the vaccine. Due to increased risk factors, older adults especially should receive the vaccine, which is why they were given priority and were among the first to receive the vaccine.
- The vaccines do not cause infertility or miscarriage. The myth that the COVID-19 vaccine causes infertility or miscarriage is linked to a disinformation campaign. The vaccine has not been linked to infertility or miscarriage.
- If you've had COVID-19, you still need the vaccine. Early evidence suggests that natural immunity from COVID-19 may not last very long. For this reason, it's recommended that you get the COVID-19 vaccine, even if you've had COVID-19 previously.
- There are no microchips or tracking devices of any kind in the vaccine.
- You cannot get COVID-19 from the vaccine. This is because it doesn't contain the live virus. It gives you the immunity to fight the virus, should you contract it in the future.
